

Quick-release hooks – Kuantan Port, Malaysia

Quick-release hooks are the foundation for all integrated, modern, and advanced mooring systems. They allow both to quickly secure a vessel to a dock with minimum effort, and to release it quickly and easily, both in normal and in emergency operations.

The **Kuantan Port Authority** experienced severe corrosion on their quick-release hooks. Early 2023 the **ZINGA Distributor** of Skudai, Johor, **ZINGAMETALL Marine & Offshore (JB)** were granted the contract for repairing and durably protecting these quick-release hooks in the **Port of Kuantan** (located on the Eastern Coast of the Malaysian Peninsula).
